Fibray+ web development

This web page that is going to be created aims to show customers the different mobile, fiber, etc. rates. with some sections, which will carry a series of actions. Libraries can be used to facilitate the work.

Next, we will explain the home (An image is shown at the end of this document of the complete home)

It consists of an upper bar, a black background, where the sections of the indicated social networks will go, and to the right, other text that has not yet been defined.

The main menu will have the logo, 5 sections with icons as seen in the image, and to the right a button where customers will be redirected to their customer area (yet to be defined), something similar to https://www.pepephone.com/mi-pepephone.

When you go through the different sections of the menu, the color will change to the blue of the logo (you can put another color for the moment), and when you are in that section of the menu, it will turn as we have indicated, blue and the bottom line fixed.

Slider/image

Below the menu, there will be some texts that can be modified, with their prices, etc. It will depend on the offer that month. The drawing doesn't have to be that, but the text should be something similar or the same.

Main tables

In this section it is divided into 3.

- MOBILE ONLY
- FIBER ONLY
- FIBER + MOBILE

Each one will have its characteristics with the price, if possible very similar to the one in the image.

It will have a "SEE DETAILS" button, which redirects to another page of the website, with the most detailed offer.

Check coverage

Next, there will be the next section, with a button "CHECK COVERAGE", which will display a POPUP, or a new page, where you must enter a number (postal code), and when you press the "check" button, you will make a query to a column called "CP" .xls, hosted on an FTP, and if it is found, it will give a positive message, indicating that we have arrived, and otherwise, a message indicating that we have not arrived, always, with a modern look.

fibery+ functionalities (section)

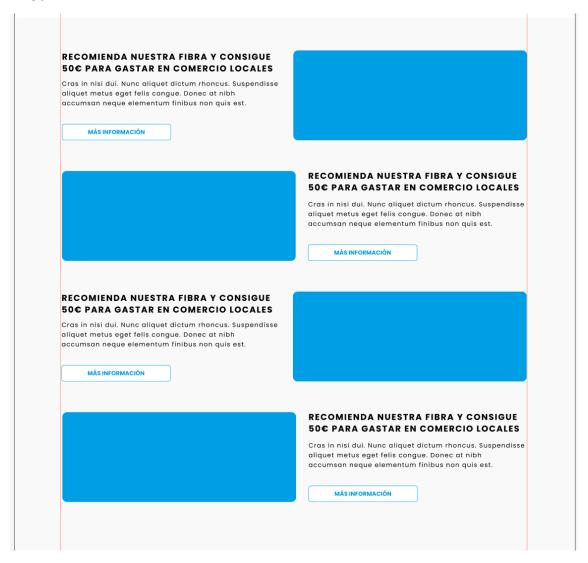

It will be a modern slider box section like in the photo.

Our rates

The rates we have will be shown here, and we will add them each month, as they are updated. We must modify this section easily from the dashboard. We need the appearance to be as exact as possible to the image.

Blog posts

The 4 latest blog posts will be displayed in this section.

Static section

Footer with links, etc.
